

LÝ HIỀN HẠO

AI / GenAI Engineer · Full-Stack Software Developer

hienhao142@gmail.com · 0328 017 473 · Ho Chi Minh City, Vietnam · [Open to Remote / Freelance Contract](#)

PROFESSIONAL SUMMARY

Software developer with 4+ years of enterprise experience and hands-on production delivery of GenAI solutions. Specializes in agentic GenAI architectures, RAG pipelines, and LLM integration using LangChain, FAISS, and Google Gemini API. Strong cloud engineering background across AWS with proven ability to integrate AI systems into enterprise backends, data pipelines, and microservices. Professional working proficiency in English; currently collaborating with a European team daily.

TECHNICAL SKILLS

GenAI / LLM	LangChain, LangChain Agents, RAG Pipelines, FAISS, Pinecone, Google Gemini API, OpenAI Embeddings, Prompt Engineering, Semantic Search, Hallucination Prevention
Agentic Systems	Multi-agent orchestration, Tool-calling / Function-calling, Agent planning & execution loops, Context & memory management, LangGraph (familiar)
Languages	Java (primary), Python (Flask, LangChain, FAISS), Groovy, JavaScript / TypeScript, Google Apps Script
Cloud & DevOps	AWS (Lambda, SageMaker, EC2, ECS, S3, RDS, SQS/SNS, API Gateway, IAM), Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD
Backend / Data	Java Spring Boot, Spring Cloud, Microservices, REST APIs, PostgreSQL, DynamoDB, Redis, Kafka, SQL & Data Modeling
Frameworks	Angular, React, Node.js, Jira ScriptRunner (Groovy), Google Workspace APIs

WORK EXPERIENCE

Software Developer — GenAI & Enterprise Automation | [Zoi / Kärcher](#) · May 2024 – Present

- Designed and deployed a production GenAI ticket summarization system integrating Google Gemini API via LangChain; implemented AES-encrypted key storage, async processing, TTL caching, and rate limiting — reducing agent ticket-reading time by ~30%.
- Built an AI-powered ticket routing system using multi-step LLM reasoning (Gemini API), fetching resolver-group data from Jira Assets/Insight via IQL and returning structured Jira Wiki Markup output — a real agentic pipeline with tool-calling patterns.
- Implemented RAG pipeline combining FAISS vector search with semantic embeddings for document retrieval and hallucination prevention using similarity-threshold gating and prompt engineering.
- Developed enterprise Jira plugins using Java, ScriptRunner (Groovy), and Jira REST APIs; automated complex workflows including child-ticket creation, attachment handling, JSM request type routing, and custom field orchestration.
- Led VBA-to-Google Workspace migrations: converted legacy Excel macros to Google Apps Script, built mail merge systems, and evaluated technical feasibility of 100+ migration projects as part of Transformation Taskforce.
- Integrated AI solutions with enterprise APIs, data pipelines, and Jira Service Management — collaborating with architects and stakeholders to translate business problems into deployable AI systems.
- Worked daily in English and French with cross-functional European stakeholders; authored technical communications and business analyses.

Full-Stack Software Developer | [Edulog](#) · May 2022 – May 2024

- Developed and maintained features for a real-time bus routing platform managing 45,000+ daily bus routes — handling 5,000–6,000 events/second via Kafka-based event streaming and multi-threaded Java backends.
- Built microservices with Java 8/11, Spring Boot, and Angular/React; leveraged Docker, Kubernetes, Jenkins CI/CD, Redis, Keycloak, and AWS for scalable cloud infrastructure.
- Participated end-to-end in PDLC including design, implementation, code review, and production deployments in an Agile (Scrum) environment.

Full-Stack Software Developer | [UBITec / umb ag](#) · January 2021 – May 2022

- Delivered outsourced enterprise projects as full-stack developer using Java Spring Boot (authentication, JWT, REST APIs) and Angular frontend.
- Operated with CI/CD pipelines via Jenkins, Docker, AWS, and OpenShift; collaborated independently with a Swiss development team using ServiceNow (PaaS/SaaS).

Software Developer (Internship → Junior) | [VNG Corporation](#) · May 2019 – December 2020

- Built Android IoT apps for Smart Meeting Rooms in Java and React Native; developed AR Web features with Angular and TypeScript; implemented on-device face recognition with Java.

CERTIFICATIONS & EDUCATION

AWS Certifications (5)

- AWS Certified Machine Learning – Specialty (MLS-C01) · 2025
- AWS Certified Security – Specialty (SCS-C03) · 2025
- AWS Certified Solutions Architect – Professional (SAP-C02) · 2025
- AWS Certified Developer – Associate (DVA-C02) · 2025
- AWS Certified Solutions Architect – Associate (SAA-C03) · 2024

Education & Language

- B.Sc. Information Technology — University of Pedagogy, Ho Chi Minh City · 2016–2020
- IELTS 7.0 (British Council, 2014) · Professional working proficiency in English & French
